The invention relates to an isolated polypeptide with signal sequences CC which allow it to be secreted extracellularly or membrane associated. The CC activity of polypeptides of the invention may be described as, CC extostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic, CC neuroprotective, immunosuppressive, haemostatic, antiinflammatory, CC cardiant, antiulcer, virucide, antithyroid, cerebroprotective, anorectic, CC useful in the treatment, or as a vaccine in the prevention of, cancer, CC wound healing disorders, infection, attherosclerosis, Parkinson's disease (CC useful in the prevention, activation, attherosclerosis, Parkinson's disease (CC uniflammation, neoplastic diseases, nervous system related disorder, CC inflammation, neoplastic diseases, nervous system related disorder, CC disorder disorder, pancreatitis, respiratory disorder, thyroid CC cardiovascular disorders, pancreatitis, respiratory disorder, thyroid developmental abnormality, gastrointestinal ulceration, neuropathy, CC haematological diseases, metabolic diseases, hyper-immunity, CC disorders e.g. hypothyroidism, brain damages, colitis, cone photo-CC transduction deficiency, neurological diseases, stroke, angiogenesis, covulation disorders, diseases in the spinal cord, thyroid gland, heart, CC growth abnormalities, and alleviation of precocious puberty. The coff the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Secreted proteins and polynucleotides useful as vaccines for preventing or treating various diseases e.g. cancer, wounds, atherosclerosis, Parkinson's disease, Alzheimer's disease, infection, autoimmune disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       06-FEB-2001;

```
The invention relates to an isolated human drug metabolising enzyme (DME) and its nucleotide. DME is useful for diagnosing, treating or preventing CC disorders associated with aberrant expression of DME, where the disorders are selected from autoimmune/inflammatory disorder such as acquired CC immunodeficiency syndrome (AIDS), asthma, atherosclerosis, psoriasis, cuveitis; a cell proliferative disorder such as arteriosclerosis, proliferative disorder such as arteriosclerosis, cc already, huntington's disease, dementia, Parkinson's disease; and relevelopmental disorder such as renal tubular acidosis, epilepsy, cc anaemia; an endocrine disorder such as adenoma, thrombosis and infections in an eye disorder such as conjunctivitis, glaucoma, cataract; metabolic disorder such as anorexia, peptic ulcer; and goitre; a gastrointestinal cc disorder such as anorexia, peptic ulcer; and liver disorders. DME is cuseful in a number of drug screening techniques and to analyse the corteome of a tissue or cell type. The invention is useful for creating knock-in humanised animals or transgenic animals to model human diseases, classue or cell type. The invention is useful for creating constance or cell type, for detecting differences in the chromosomal coartier or affected individuals, and as hybridisation probes for mapping naturally occurring genomic sequences. The present sequence is human DME-10 cDNA xx

                                                                                                                                                                                                                                                                                                                                                                                                                                          Schmidt JP, Wright RJ, Bruns CM, Marjanovic MM, Shen F; Harthshorne TA, Suchorolski MT, Altus CM, Pitts SJ, Elder LV; Mooney EM, Delegeane AM, Panesar IS, Banville SC, Reddy TP; Stevens KA, Blanchard JL, Panzer SR, Wang X, Au AP, Gerstin EH; Peralta CH, Anderson SB, Rioux P, Shen EJ, Wu MC, Stuve LL; Lagace RE, Spiro PA, Stewart EA, Wingrove J, Vitt UA, Kirton ES; Xu Y, Kwong M, Policky JL, Hurwitz BL, Ma Y, Jackson JL, Gietzer Patury S, Shi X, Suarez CJ;
The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated
                                                                                                                                                                                                                                                   New diagnostic and therapeutic polynucleotides and polypeptides, useful in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy o

The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp polymucleotide of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm

The invention discloses a polymucleotide comprising a sequence selected CC from 1970 fully defined nucleotide sequences which encode novel CC polypeptides. Also claimed is a polypeptide encoded by the polymucleotide CC or its partial paptide, an antibody binding to the polypeptide or peptide CC of the polymucleotide, immunologically assaying the polypeptide or peptide CC paptide of the polymucleotide by contacting the polypeptide or peptide CC with the antibody of the encoded protein, and observing the binding CC expressible manner and an antisense polymucleotide. The oligonucleotide in an CC expressible manner for synthesising the polymucleotide, or as a probe CC is useful as a primer for synthesising the polymucleotide, or as a probe CC proteins are useful as pharmaceutical agents and many disease-related CC genes may be included in them, for developing a diagnostic marker or CC of gene therapy. The genes are involved in tissue and/or cell consciption-related proteins, signal transduction-related proteins, concer, tumours, signal transduction-related proteins, concer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The sequence presented is a cDNA of the invention. Note: Some of the sequence data for this patent is not represented in the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; Page; 222pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polynucleotides and polypeptides, useful for developing marker or medicines for regulation of their expression and \epsilon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           as targets of gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2003-450961/43.

The polypeptides and polypucleotides are useful for diagnosing disease, and screening for potential therapeutic agents. The sequences are useful for treating metabolic disorders, cardiomyopathy, diabetes, hypertension, congenital heart defects, articles attrials septal defect (ASD), attriaventricular canal defect, ductus arteriosus, pulmonary stenosis, subacrtic stenosis, ventricular septal defect (VSD), valve diseases, tuberous sclerosis, scleroderma, atherosclerosis, obesity, infectious disease, ancrexia, neurodegenerative disorders, Alzhelmer's disease, Parkinson's disease, immune disorders, haematopoietic disorders, haematopoietic disorders, haemophilia, hypercoagulation, Crohn's disease polynucleotides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   27-APR-2001;

Secreted proteins and polynucleotides useful as vaccines for preventing or treating various diseases e.g. cancer, wounds, atherosclerosis, Parkinson's disease, Alzheimer's disease, infection, autoimmune disorder
Claim 2(a); Page 251-252; 335pp; English.
                                                                                                         infection, autoimmune disorder
```

The invention relates to an isolated polypeptide with signal sequences which allow it to be secreted extracellularly or membrane associated. The contivity of polypeptides of the invention may be described as, contivity of polypeptides of the invention may be described as, concerning the continuous continuous pressive, haemostatic, antiparkinsonian, nootropic, continuous continuous cardiant, antiulcer, virucide, antithyroid, cerebroprotective, amorectic, cardiant, antiulcer, virucide, antithyroid, cerebroprotective, amorectic, cand metabolic. Polypeptides and polynucleotides of the invention are considered in the treatment, or as a vaccine in the prevention of, cancer, consequently disorders, infection, atherosclerosis, Parkinson's disease and Alzheimer's disease, anticimmune disorder, haematopoietic disorder, cand alzheimer's disease, anticimmune disorder, haematopoietic disorders and cardiovascular disorders, pancreatitis, respiratory disorder, confidently, continuous system related disorders and cardiovascular abnormality, gastrointestinal ulceration, neuropathy, continuous diseases, hyper-immunity, continuous diseases, metabolic diseases, sperm dysfunction, thyroid disorders e.g. hypothyroidism, brain damages, colitis, cone photocontinuous disorders, diseases in the spinal cord, thyroid gland, heart, convolation disorders, diseases in the spinal cord, thyroid gland, heart, convolation disorders, and alleviation of precocious puberty. The sequences given in records ABQ86130-ABQ86184 represent novel human cDNA's

Claim 12; SEQ ID NO 20; 142pp; English.

This invention relates to novel drug metabolising enzymes (DME) and the nucleotide sequences which encode them. The invention may be useful for the development of compounds with a cytostatic, immunosuppressive, antiinflammatory, endocrine, ophthalmological, gastrointestinal or hepatotropic activity acting as an agonist or antagonist of drug metabolising enzyme activity. The invention may be used in the diagnosis and treatment of disorders associated with decreased or increased expression or activity of drug metabolising enzymes. Such disorders include cancer, cell proliferative disorders, autoimmune/inflammatory, endocrine, eye, gastrointestinal (including liver disorders) and metabolic disorders. The present sequence is that of a gene which encodes a human drug metabolising enzyme (DME) of the invention. Note: This sequence did not form part of the printed specification but was obtained in electronic format from EPO.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1962 BP; 428 A; 541 C; 473 G; 520 T; 0 U; 0 Other;

The present sequence encodes a cat cauxin protein (I) or its salt, which CC is cat kidney disease marker. Also described: (I) a partial peptide (II) cof (I); (2) a nucleic acid (III) encoding (I) or (II); (3) a vector (IV) CC comprising (III); (4) a transformed host (V) comprising (III) or (IV); (C comprising (III)) or (II) by culturing (V); (6) a antibody (VI) which CC couples specifically with (I) or (II); (7) diagnosing cat kidney disease CC which involves measuring (I) quantitatively, and where reduction of CC amount of (I) indicates presence of the disease; (8) a cat kidney disease CC diagnostic agent comprising (I) labelling agent, a reagent which measures CC the biological activity of urinary (I) or (VI); and (9) a cauxin CC cat kidney disease marker and (VI) is useful for diagnosing cat kidney CC disease. (I) provides an early marker for the disease, and replaces CC complicated diagnostic methods such as X-ray imaging, ultrasonic imaging,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

Also described: (I) a partial peptide (II) CC of (I); (2) a nucleic acid (III) encoding (I) or (II); (3) a vector (IV) (CC comprising (III); (4) a transformed host (V) comprising (III) or (IV); (CC comprising (II) or (II) by culturing (V); (6) a antibody (VI) which CC couples specifically with (I) or (II); (7) diagnosing cat kidney disease (CC which involves measuring (I) quantitatively, and where reduction of (CC amount of (I) indicates presence of the disease; (8) a cat kidney disease (CC diagnostic agent comprising (I) labelling agent, a reagent which measures (CC disease activity of urinary (I) or (VI); and (9) a cauxin (CC cat kidney disease marker and (VI) is useful for diagnosing cat kidney (CC cat kidney disease marker and (VI) is useful for diagnosing cat kidney (CC complicated diagnostic methods such as X-ray imaging, ultrasonic imaging, or blood feathers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δ

                              Polypeptide-human carboxylatase-24.64 and
                              polynucleotide
                              for
                             coding
                              it.
```

The present invention relates to a polypeptide-human carboxylatase-24.64, the polymucleotide for coding it, the process for preparing the polypeptide by DNA recombination, the application of the polypeptide in treating diseases such as primary hypertension, digestive ulcer, nephrotic, bronchial asthma, tremor, etc, the antagon of the polypeptide and its medical action, and the application of the polynucleotide are new. The present sequence represents human carboxylatase 24.64 encoding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
The invention relates to a purified human carboxylesterase-like enzyme CC polypeptide. Carboxylesterase-like enzyme and its DNA are useful for CC screening for agents which decrease or modulate the activity of CC carboxylesterase-like enzyme polypeptide. Carboxylesterase-like enzyme is useful for treating a carboxylesterase-like enzyme dysfunction related CC disease, such as organophosphorus intoxication, cancer and osteoporosis. CC Compounds that increase the ability of human carboxylesterase-like enzyme to bind to organophosphorus compounds are useful as detoxifying agents. CC Carboxylesterase-like enzyme agonists and antagonists are useful for CC treating osteoporosis, Paget's disease and degradation of bone implants, CC particularly dental implants. Carboxylesterase-like enzyme is useful in CC diagnostic assays for detecting diseases and abnormalities or CC susceptibility to diseases or abnormalities related to the presence of carboxylesterase-like enzyme. The CC coding sequence of carboxylesterase-like enzyme polymucleotide is useful cin gene therapy and for generating antisense oligonucleotides or cribozymes which specifically bind to mRNA transcribed from CC carboxylesterase-like enzyme DNA. These antisense oligonucleotides are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; carboxylesterase-like enzyme; organophosphorus intoxication; gen osteopathic; gene therapy; osteoporosis; antisense therapy; cytostatic; detoxifying agent, Paget's disease; bone implant degradation; cancer; dental implant; enzyme; gene expression; ss.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALIGNMENTS

Human carboxylesterase family member 53010.

23-SEP-2002 ABB79537;

(first entry)

ABB79537 standard; protein;

581 AA

Carboxylesterase; enzyme; human; analgesic; nootropic; antiinflammatory;

diagnosis; therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is the protein sequence of human 53010, a novel C protein containing the structural characteristics of a carboxylesterase CC family member. The invention provides 53010 nucleic acids, antisense CC molecules, expression vectors, host cells, transgenic animals, 53010 CC proteins, fusion proteins, antigenic peptides, anti-53010 antibodies and CC methods for detecting the presence of 53010 polypeptides or nucleic acids, of identifying a compound that binds to the 53010 polypeptide, and CC controlling the activity of the polypeptide. The 53010 polypeptide and CC nucleic acids can act as novel diagnostic and therapeutic agents for CC controlling disorders involving aberrant or deficient hydrolysis of CC carboxylic esters. As 53010 mRNA is highly expressed in the central and CC pain models, 53010 molecules can also act as novel diagnostic targets and CC therapeutic agents for controlling neurological disorders, such as pain-CC related disorders. A claimed method of treating or preventing a disorder CC of a 53010 expressing cell involves administering a compound that CC modulates 53010 activity or expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              53010 nucleic acids, useful for diagnosing and treating e.g. vascular diseases, autoimmune diseases, or neurodegenerative diseases, as surrogate markers, in tissue typing and chromosome mapping.

The present invention describes the use of polypeptides related to urological disorders for identifying a compound capable of treating a urological disorder, identifying a subject having a urological disorder, or treating a subject having a urological disorder. Also described: (1) method for identifying a compound capable of treating a urological disorder; (2) a method for identifying a subject having a urological
                                                                                                                                       Use of polypeptides related to urological disorders, e.g. 44390, 5 211 or for identifying a compound capable of treating a urological disorder or identifying and treating a subject having a urological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          14-JAN-2004;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                disorder; and (3) a method for treating a subject having a urological disorder. The compound has uropathic and cytostatic activities. The polypeptides related to urological disorders are useful for identifying a compound capable of treating a urological disorder, identifying a subject having a urological disorder, or treating a subject having a urological disorder. Disorders include urinary incontinence and benign prostatic hyperplasia. The present sequence represents a human urological disorder related protein, which is used in the exemplification of the present

Secreted proteins and polynucleotides useful as vaccines for preventing or treating various diseases e.g. cancer, wounds, atherosclerosis, parkinson's disease, Alzheimer's disease, infection, autoimmune disorder.

Claim 1(a); Page 312-313; 335pp; English.

The invention relates to an isolated polypeptide with signal sequences CC which allow it to be secreted extracellularly or membrane associated. The CC activity of polypeptides of the invention may be described as, CC cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic, CC neuroprotective, immunosuppressive, haemostatic, antiinflammatory, CC cardiant, antiulcer, virucide, antityroid, cerebroprotective, anorectic, and metabolic. Polypeptides and polynucleotides of the invention are CC useful in the treatment, or as a vaccine in the prevention of, cancer, CC wound hashing disorders, infection, atherosclerosis, Parkinson's disease and hlzheimer's disease, autoimmune disorder, haematopoietic disorder, inflammation, neoplastic diseases, nervous system related disorders, and CC cardiovascular disorders, pancreatitis, respiratory disorder, CC hyperproliferation, systemic autoimmune disease, hyper-immunity, CC developmental abnormality, gastrointestinal ulceration, neuropathy, CC developmental abnormality, asstrointestinal ulceration, thyroid disorders e.g. hypothyroidism, brain damages, colitis, cone photo-cc transduction deficiency, neurological diseases, stroke, angiogenesis,

Novel human drug metabolizing polypeptide, useful in diagnosis, prevention or treatment of autoimmune/inflammatory, cell proliferative neurological; developmental, endocrine, metabolic and gastrointestinal

Claim 65; Page 155-156; 169pp; English.

The invention relates to an isolated human drug metabolising enzyme (DME) CC and its nucleotide. DME is useful for diagnosing, treating or preventing cd disorders associated with aberrant expression of DME, where the disorders commune/inflammatory disorder such as acquired immunedficiency syndrome (AIDS), asthma, atherosclerosis, psoriasis, curveitis; a cell proliferative disorder such as arteriosclerosis, people cc uveitis; a cell proliferative disorder such as arteriosclerosis, cc cirrhosis, hepatitis, and cancer; a neurological disorder such as cc advelopmental disorder such as renal tubular acidosis, epilepsy, cc alevelopmental disorder such as renal tubular acidosis, epilepsy, cc anaemia; an endocrine disorder such as adenoma, thrombosis and infections cr an eye disorder such as conjunctivitis, glaucoma, cataract; metabolic clisorder such as cystic fibrosis, diabetes and goitre; a gastrointestinal cc disorder such as cystic fibrosis, diabetes and goitre; a gastrointestinal cc useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. The invention is useful for creating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypoptides may be used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorder, endocrine autoimmune/inflammatory disorders, developmental disorder, endocrine CC disorder, neurological disorders, gastrointestinal disorders, or CC infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline CC invention. Note: The sequence represents a dithp protein of the CC invention. Note: The sequence data for this patent is not represented in CC the printed specification, but was obtained in electronic format directly cycles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Schmidt JP, Wright RJ, Bruns CM, Marjanovic MM, Shen F;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated polypeptide with signal sequences CC which allow it to be secreted extracellularly or membrane associated. The CC extrict of polypeptides of the invention may be described as, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic, neuroprotective, immunosuppressive, haemostatic, antiinflammatory, CC cardiant, antiulcer, virucide, antithyroid, cerebroprotective, anorectic, and metabolic. Polypeptides and polymucleotides of the invention are useful in the treatment, or as a vaccine in the prevention of, cancer, CC wound healing disorders, infection, atherosclerosis, Parkinson's disease and polymucleotides, harkinson's disease, autoimmune disorder, haematopoietic disorder, inflammation, neoplastic diseases, nervous system related disorders and cardiovascular disease, autoimmune disorder, haematopoietic disorders and CC dardiovascular disorders, pancreatitis, respiratory disorder, hyperproliferation, systemic autoimmune disease, hyper-immunity, CC developmental abnormality, gastrointestinal ulceration, neuropathy, haematological diseases, metabolic diseases, sperm dysfunction, thyroid disorders e.g. hypothyroidism, brain damages, colitis, cone phototraschea, thymus, hypothyroidism, brain damages, colitis, cone phototraschea, thymus, lymph node and muscular system, obesity; anorexia, CC trachea, thymus, lymph node and muscular system, obesity; anorexia, CC trachea, thymus, lymph node and muscular system, obesity; anorexia, CC proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Secreted proteins and polynucleotides useful as vaccines for preventing or treating various diseases e.g. cancer, wounds, atherosclerosis, Parkinson's disease, Alzheimer's disease, infection, autoimmune disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 581
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1(a); Page 313-314; 335pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                  Isogai T, S
Yamamoto J,
Seki N, You
                                                                                                                                                                                                                       The present invention relates to novel human secretory or membrane proteins (ADAS4072-ADAS5710) and their coding sequences (ADAS2433-ADAS4071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                    Claim
                                                                                                                                                                                                                                                                                                                                         New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy.
